OpenModelica is ... its developers, testers, bug reporters, contributors and OSMC members

Thank you!

asodja, sjoelund.se, sebco011, lochel, wbraun, niklwors, hubert.thieriot, petar, perost, Frenkel TUD, Unknown, syeas460, adeas31, ppriv, ricli576, haklu, dietmarw, levs, mahge930, x05andfe, mohsen, nutaro, x02lucpo, florosx, x06hener, x07simbj, stebr461, x08joekl, x08kimja, Dongliang Li, jhare950, x97davka, krsta, edgarlopez, hanke, henjo, wuzhu.chen, fbergero, harka011, tmtuomas, bjozac, AlexeyLebedev, x06klasj, ankar, kajny, vasaie_p, niemisto, donida, hkiel, davbr, otto@mathcore.com, Kaie Kubjas, x06krino, afshe, x06mikbl, leonardo.laguna, petfr, dhedberg, g-karbe, x06henma, abhinnk, azazi, x02danhe, rruusu, x98petro, mater, g-bjoza, x02kajny, g-pavgr, x05andre, vaden, jansilar, ericmeyers, x05simel, andsa, leist, choeger, Ariel.Liebman, frisk, vaurich, mwalthner, mtiller, ptauber, casella, vitalij, hkiel, jank, rfranke, mflehmig, crupp2, kbalzereit, marchartung, Andreas, Karim, adrpo
What is OpenModelica? (I)

- Advanced Interactive Modelica compiler (OMC)
  - Supports MSL v. 3.2.1/3.2.2/MSL trunk
- Basic and advanced environments for creating models
  - OMShell - an interactive command handler
  - OMNotebook - a literate programming notebook
  - OMEdit - Connection Editor, *Transformational and Algorithmic Debugger, 3D Viewer*
  - OMPlot - OpenModelica Plotting
  - OMOptim - OpenModelica Optimization Editor
  - OMPython/OMJulia/OMMatlab - OpenModelica Python/Julia/Matlab Environment
  - MDT - an advanced textual environment in Eclipse
  - OMSimulator - co-simulation of composite models using FMUs or via TLM
What Is OpenModelica? (II)

- Advanced Eclipse-based Development Environment
- Modelica Development Tooling (MDT) - started in 2005
  - Code Assistance, Debugging, Outline & a lot more
  - *Used heavily for OpenModelica development*
  - Used in many OpenModelica Development Courses
  - *Should be replaced by OMEdit*
- ModelicaML UML/SysML integration
What is OpenModelica? (III)

- Open-source community services
  - Website and Support Forum
  - Source versioning (github.com)
  - Trac with bug database
  - Development courses
  - Mailing lists
What is OpenModelica? (IV)

- **Open-source community services**
  - Extensive testing (unit & library coverage: 72 libraries, 14216 models) with interactive result comparison. 9 test servers currently
    - [https://libraries.openmodelica.org/branches/overview-combined.html](https://libraries.openmodelica.org/branches/overview-combined.html)
    - Linux (GCC & CLANG), Windows (MinGW GCC), Mac OS (GCC)
    - Platforms: x86, x86_64, ARM
    - 3 runtimes: FMI, C runtime, C++ runtime
  - ~10,181 tests ran on each pull request via Hudson
  - Automatic nightly builds for Window & Linux & Mac OS
What is OpenModelica? (V)

- An incubator platform for research
  - 9 PhDs since 2004 (Debugging, Parallelization, PDEs Extensions)
  - 36 Master’s theses since 2004
  - Both the students and the project benefit
- Master theses at PELAB 2006-2018
  - Refactoring/Parsing and Language extensions
  - UML/SysML view of Modelica code
  - 2D and 3D visualization tools
  - Static and runtime debugging tools
  - Advanced code generation and parallelization of simulation code
  - Bootstrapping and Java Interface
  - Function pointers
  - NVIDIA for Cuda and OpenCL parallel simulation
  - OMEdit - Modelica Connection Editor
  - OMWeb - server based Modelica simulation for teaching
  - OMCcc parser
  - PDE-solver using ParModelica
- External Master theses
  - Model based diagnostics at ISY (Dep. Of Electrical Engineering)
  - Monte-Carlo simulation of Satellite Separation Systems at SAAB
  - Interactive Simulations (EADS)
  - Additional Solvers + Event handling (FH-Bielefeld)
  - EADS - ModelicaML
- A Base for commercial and open source products
  - MathCore AB, Bosch Rexroth, VTT, Equa, Evonik, ABB
1997 - started as a master thesis
2003 - first usable internal version
2004 - first external version: OpenModelica 1.1
2005 - more development: OpenModelica 1.3.1

2006 - major milestone
- Translated the whole compiler to MetaModelica
- Integrated Development Environment for the compiler
- OpenModelica website started
- Moved the code repository to Subversion management
- Extended the OpenModelica environment with new tools
- 4 versions released during the year
- External people start using OpenModelica
  - ~ 200 downloads/month
  - first development course at INRIA
OpenModelica Roadmap - Past

2007 - continued development and community involvement

- Improvement in website, support and documentation
- Answered ~1000 questions on the forum
- Portability is highly improved, ported to 4 platforms
  - Linux, Mac, Solaris, Windows (version 1.4.3)
- Improvement of the compiler development tools in Eclipse
- OpenModelica Community starts to react
  - contribute code & report bugs & request enhancements & participate in answering questions in the OpenModelica forum
  - participate at courses and workshops
- New server acquired for better community services
- Increased usage: ~600 downloads/month
- Open Modelica Consortium created in December 4
  - 4 months of work
  - 9 organizations as members already (3 Universities, 6 Companies)
  - discussions are ongoing with other 6 companies
2008 - Further work on the compiler

- Release 1.4.4 and 1.4.5
  - Linux, Mac, Solaris, Windows
- New Solver Interface
- Refactoring
- Dynamic loading of functions
- Merging of MathCore front-end code
- 744 commits in Subversion
- Other things I don’t remember
2009

- Work mainly happened in OSMC (partially on a non-public branch)

Front-end
- Refactoring (OSMC)
- Enumerations (OSMC)
- Java Interface and Bootstrapping (Martin Sjölund)
- MultiBody flattening (OSMC)
- Constraint connection graph breaking (VTT + OSMC)
- Support for Modelica 3.x and 3.x annotations (OSMC)

Back-end
- Tearing in the back-end (Jens Frenkel)
- Template Code Generation and CSharp backend (Pavol Privitzer, Charles University Prague)
- Interactive Simulations (EADS)
- C++ Code generation (Bosch Rexroth)
- Java Interface and Bootstrapping (Martin Sjölund)
- Additional Solvers + Events (Willi Braun, FH-Bielefeld)

General
- New ModelicaML + SysML prototype (EADS)
- 1144 commits in subversion (Since 2009 to February 8, 2010)
- Bug fixes (OSMC)
- Release 1.5.0 and 1.5.0-RC_X (Linux, Mac, Solaris, Windows)

More things I don’t remember
2010 - 2011

- Support for Modelica Standard Library 3.1 (Media & Fluid in works)
- **Front-end**
  - MultiBody flattening (OSMC)
  - Support for Modelica 3.x and 3.x annotations (OSMC)
  - Performance Enhancements
  - Stream connectors
  - Media & Fluid work is on the way
- **Back-end**
  - Back-end redesign (Jens, Willi, Martin, Per, Adrian, Kristian, Filippo)
  - Tearing in the back-end (Jens Frenkel)
  - Template Code Generation and CSharp backend (Pavol Privitzer, Charles University Prague)
  - Interactive Simulations (EADS)
  - C++ Code generation (Bosch Rexroth)
  - Additional Solvers + Events + Linearization (Willi Braun, FH-Bielefeld)
- **General**
  - OMEdit - new connection editor
  - Bootstrapping OMC (90% finished)
  - 2550 commits in subversion from 2010 to Feb. 7, 2011 (double than 2009-2010)
  - Bug fixes ~300+ (OSMC)
  - Release 1.6.0 (Linux, Mac, Windows)
  - Downloads Windows (~16434), Linux (~8301), Mac (~2816)

- More things I don’t remember
2012 - 2013

- Support for Modelica Standard Library 3.2.1 including Media & Fluid

- Front-end
  - Performance Enhancements
  - Media & Fluid work
  - Operator overloading
  - New instantiation module started

- Back-end
  - Modular back-end with more optimization modules (Jens, Willi, Martin)
  - New simulation runtime redesign (Willi, Lennart, Jens, Martin, Adrian)
  - C++ Code generation (Bosch Rexroth)
  - FMI export & import
  - Initialization, Jacobians (Lennart Lochel, Willi Braun, FH-Bielefeld)
  - Support for parallelization (Martin)
  - Parallel extensions in functions

- General
  - Uncertainties support (OpenTURNS connection & Data reconciliation)
  - MDT GDB debugging based on GDB and the bootstrapped compiler
  - OMEdit - improvements
  - Bootstrapping OMC (100% finished) using Boehm GC
  - 3909 commits in subversion from 2012 to Feb. 4, 2013
  - 2000 forum posts (questions and answers)
  - Bug fixes ~247+ (OSMC)
  - Release 1.9.0 (Linux, Mac, Windows)
  - Downloads Windows (~45307), Linux (~15543), Mac (~5367)

- More things I don’t remember
OpenModelica Roadmap - Past

- **2014 - 2017 - Most focus on libraries support & performance**
  - MSL 3.2.1 (100% build/98% simulate), ModelicaTest 3.2.1, PetriNet, Buildings, PowerSystems, OpenHydraulics, ThermoPower, and ThermoSysPro
  - Switch to bootstrapped compiler

- **Front-end, Back-end, Simulation Runtime, Graphical Clients**
  - Development switched to bootstrapped compiler since November 2014
  - Partially new graph-based front-end with better support for libraries
  - Improved back-end: initialization, system solving, parallelization, cse optimization, dynamic optimization
  - Faster and much more user friendly OpenModelica Connection editor

- **General**
  - ~9000 commits in subversion from Feb. 2014 to Feb., 2016
  - Bug fixes
  - Release 1.9.2 (Linux, Mac, Windows)
OpenModelica Roadmap - Past

- **2018 - 2019** - focus on performance, scalability, bug fixes

  - **OMC & Clients**
    - Performance & scalability improvements
    - Bug fixes to OMC, OMEdit, FMI

  - **OMSimulator**
    - Combined FMI & TLM support, SSP support
    - OMEdit GUI support

  - **OMJulia**
    - API to access OpenModelica from Julia

  - **General**
    - From Feb 2018 - Feb 2019
      - 30+ contributors
      - 800 commits (OMCompiler)
      - 969 commits (OMSimulator)
      - 213 commits (OMEdit)
    - Releases 1.13.0, 1.13.1, 1.13.2
2018 - 2019 - focus on performance, scalability, bug fixes

New Front-End - status
- The new front-end ~90% complete, (see #4138 on Trac)
- 100+ times faster, 5+ times less memory consumption (no array expansions, no expansion of for loops in equations)
- The new front-end also brings better support for libraries
- Developed in line with MCP-0019: Flattening
- Currently 423/424 models from MSL 3.2.3 pass the new front-end
- Last year 107/387 models from MSL 3.2.3 passed the new front-end

New Front-End - remaining work
- Expandable connectors (add virtual nodes)
- Making the backend cooperate with the new way the DAE is produced
- Support for state machines
- (Support for MetaModelica)
OpenModelica Roadmap – Past

- 2018 - 2019 - focus on performance, scalability, bug fixes

- OMEdit - better Modelica support
  - Much more stable OMEdit, a lot of bug fixes and new usability features
  - Auto completion support
  - Support for OMSimulator

- Redeclare and Replaceable Support
  - Waiting for the new front-end to become mature enough so we don’t frustrate users
OpenModelica Testing (I)

- Testing procedure
  - [https://libraries.openmodelica.org/branches/overview-combined.html](https://libraries.openmodelica.org/branches/overview-combined.html)
  - Run tests on previous OpenModelica version until 1.8.1
  - Detect both model regression and performance regression, all information saved in a database
  - 72 libraries, 14216 models with interactive result comparison.
    - 3 dedicated test servers
    - Linux (GCC & CLANG), Windows (MinGW GCC), Mac OS (GCC)
    - Platforms: x86, x86_64, ARM

Statistics
- 5 runtimes: FMI, C runtime, C++ runtime, newInst, daeMode

Van der Pol Model

This example describes a Van der Pol oscillator. Notice that the keyword model is used instead of class with
the same meaning. This example contains declarations of two state variables x and y, both of type Real and a parameter
constant lambda, which is a so-called simulation parameter. The keyword parameter specifies that the variable is
constant during a simulation run, but can have its value initialised before a run, or between runs. Finally, there is
an equation section starting with the keyword equation, containing two mutually dependent equations that define the
dynamics of the model.

model VanDerPol
  Real x[2] = [1.0; 1.0];
  parameter Real lambda = 0.1;
  equation
    der(x[1]) = x[2];
    der(x[2]) = -x[1] + lambda*(1 - x[1]^2)*x[2];
end VanDerPol;

1 Simulation of Van der Pol

If you end a command returned in an open loop, change the direction of

Plot by OpenModelica
The OMC Compiler

- Implemented mainly in MetaModelica (401 packages) and a C/C++ runtime
- Is available as a dynamic library (faster than CORBA/ZMQ)
- Used from OMEdit, OMNotebook, OMShell, OMOptim, OMPython, MDT
- Automatically generated API that can be used from QT
OpenModelica
- What is OpenModelica?
- The past and present

OpenModelica Technical Overview
- OMC, OMSHELL, OMNotebook, OMEdit, ModelicaML, OMSimulator, OMPython, OMJulia, OMMatlab

OpenModelica Development Environment
- MetaModelica
- The Eclipse Environment

OpenModelica Latest Developments (2019-2020)
- **OMC**
  - Implemented mainly in MetaModelica and C/C++

- **Modelica**
  - classes, models, records, functions, packages
  - behavior is defined by equations or/and functions
  - equations
    - differential algebraic equations and conditional equations

- **MetaModelica extensions**
  - local equations
  - pattern equations
  - match expressions
  - high-level data structures: lists, tuples, option and union types
Creation of Modelica projects using wizards
Creating Modelica packages using wizards
Creation of Modelica classes, models, etc, using wizards
Parse error detection on file save
Semantic error detection on compilation

Outline

- OpenModelica
  - What is OpenModelica?
  - The past

- OpenModelica Technical Overview
  - OMC, OMShell, OMNotebook, OMEdit, ModelicaML, OMSimulator, OMPython, OMJulia, OMMatlab

- OpenModelica Development Environment
  - MetaModelica
  - The Eclipse Environment (MDT)

- OpenModelica Latest Developments (2019-2020)
Latest Developments (2019-2020) (I)

- **2019 - 2020 - focus on performance, scalability, bug fixes**
- **OMC & Clients**
  - Performance & scalability improvements
  - Bug fixes to OMC, OMEdit, FMI
- **OMSimulator**
  - Combined FMI & TLM support, SSP support
  - OMEdit GUI support

**General**

- **From Feb 2019 - Feb 2020**
  - 30+ contributors
  - 929 commits (OpenModelica/OMCompiler/OMEdit)
  - 100 commits (OMSimulator)
- Releases 1.13.2, 1.14.1
New Front-End - status

- The new front-end ~98% complete, (see #4138 on Trac)
- 100+ times faster, 5+ times less memory consumption (no array expansions, no expansion of for loops in equations)
- The new front-end also brings better support for libraries
- Developed in line with MCP-0019: Flattening
- Currently 424/424 models from MSL 3.2.3 pass the new front-end
- Two years ago 107/387 models from MSL 3.2.3 passed

New Front-End - remaining work

- Small issues remaining with array modifiers (new battery models in MSL master)
- Some issues remaining with replaceable support (Buildings library)
- Making the backend cooperate with the new way the DAE is produced
- Support for state machines
- (Support for MetaModelica)
Latest Developments (2019-2020) (III)

- OMEdit
  - **Faster** OMEdit using the new frontend
  - A lot of bug fixes and new usability features
  - Auto completion support
  - GUI for OMSimulator, SPP
  - Supports the standard Windows installation
  - Encryption support
Latest Developments (2019-2020) (IV)

- **OMEdit - Redeclare and Replaceable Support**
  - Support for redeclare/replaceable is implemented
  - The new front-end is now mature enough to not frustrate users
 Latest Developments (2019-2020) (V)

- **OMEdit - Redecclare and Replaceable Support**
  - OMEdit now uses new API called `getElements` instead of `getComponents` which returns also replaceable elements
  - The NF is used to fully qualify classes so that choicesAllMatching via constrainedby class is queried correctly
  ```
  getAllSubtypeOf($TypeName(AllLoaClasses), PartialMedium);
  ```
  - An ANTLR4 based Modelica parser is used to parse the replaceable elements and their modifiers, OMEdit partially understands Modelica now
  - Redeclared classes/components can be modified via the GUI

- **Remaining issues**
  - Discuss OMEdit changes (changed Component to Element)
  - Fix random crashes
  - Integrate the changes in OpenModelica 1.15.0
Future 2020+

- **OpenModelica on Windows**
  - Use clang to speed up compilation and be able to compile bigger models

- **OMC / OMEdit - new API for instance hierarchy editing**
  - Concept testing - work in progress
  - Use the new front-end to instantiate the Model
  - Give the instance tree to OMEdit, automatically generated C++ classes for walking the tree
  - Allow OMEdit to edit the instance tree directly
    - Propagate the instance tree edits to the top level class
    - Build a simulation from the changed instance tree

- **Editor in the Web Browser and OMSimulator in the cloud**
  - Will be implemented as part of a new project - HUBCAP

- **Julia instead of MetaModelica?**
  - Concept testing - work in progress
  - Translate the entire compiler from MetaModelica to Julia
  - See talk later
Thank You!
